

SIEM + SOAR + XDR + GRC =
The **ONLY** Integrated Security, Risk,
and Compliance Management Solution

Impelix IMPACT Platform

The Impelix IMPACT Platform was built for teams who contend with the burden of ensuring their firms' cyber and compliance readiness. These teams need to respond to threats in a timely and efficient manner, while leveraging limited staff, siloed technologies, and constrained budget dollars.

Impelix provides an easy-to-use SaaS platform that enables those security and risk teams to understand their global security posture, and then focus on measurable, continuous improvement using real-time data. This data includes metrics (and the supporting evidence) on cyber hygiene and tool efficacy, compliance readiness, ROI, operational efficiency, and third-party risk.

Unlike legacy SIEM, SOAR, XDR, or GRC vendors, the Impelix IMPACT Platform provides a unified security, risk, and compliance management platform that includes automated incident investigation and response and real-time risk and compliance monitoring, by leveraging unlimited data ingestion at flat, predictable pricing.

✓ Improve Cost Efficiency

- User-based pricing model with unlimited data ingestion
- One year of data retention in hot storage
- Significant reduction in alert noise enables lean security teams to meet the increasing demands of investigating and responding to security events

✓ Strengthen Your Security Posture

- Machine-learning driven alert validation significantly limits alert fatigue and enables security analysts to focus on the real threats, instead of the noise
- Automated, real-time event correlation presents the enterprise-wide impact of security incidents
- Automated case management and incident response delivered from one platform

✓ Reduce Compliance Risk

- Real-time compliance monitoring, across many common frameworks, provides the insight needed to facilitate continuous improvement and measure progress over time
- Tool efficacy monitors the effectiveness of security controls and their ROI to the organization
- External risk provides insights into potential negative business impacts that can be caused by business partners, supply chain and other external sources

The ONLY integrated platform that combines security operations and organizational risk data into a single, unified dashboard.

This enables your teams to easily progress from a **Reactive** security operations model to a **Proactive** one and finally a **Preventative** one, all within a single platform.

- Reduces costs and simplifies budgeting with predictable user-based pricing model, unlimited data ingestion, and one year of data retention in hot storage
- Facilitates monitoring of the full attack surface including identity, endpoint, network, email, and cloud
- Enables swift (automated or one-click) incident response within a single platform
- Provides insight into business and reputation risk, financial risk, supply chain risk, and potential data leaks
- Displays which of your security tools are stopping threats and generating useable alert data, and which are not
- Delivers an easy-to-use SAAS platform, with a time-to-value of less than 30 days

Impelix IMPACT SecOps

Move past the limits of legacy SIEM – the noise, cost, and complexity.

With Impelix IMPACT SecOps platform service, it's engineered with machine-led automation and intelligence to speed up and streamline modern security operations with full visibility across the entire organizational attack surface.

Impelix IMPACT Enterprise Risk

Knowing your company's current cyber readiness, risk, and compliance state is critical to assessing its security posture.

It is increasingly expected by the C-suite to drive better business decisions. Impelix IMPACT Enterprise Risk offers continuous monitoring and comprehensive reporting, in a streamlined service, to make risk measurable and easily understood.

Capabilities

	IMPELIX IMPACT Enterprise Risk	IMPELIX IMPACT SecOps
Turnkey SaaS Platform	✓	✓
Security Control Efficacy and Posture Assessment	✓	✓
Cyber Hygiene Tracking	✓	✓
Real-time Compliance Monitoring*	✓	✓
Compliance Reporting/Dashboards	✓	✓
Organizational Risk Monitoring**	✓	✓
Third Party Risk Monitoring	ADD-ON	ADD-ON
Staff Impact of Noisy or Poorly Configured Tools	✓	✓
Financial Impact of Redundant or Overlapping Tools	✓	✓
Operational Efficiency of Security Teams	✓	✓
Business Metrics for ROI Evaluation of Tools and Staff	✓	✓
Unlimited Flat Rate Data Ingestion		✓
One Year Hot Data Retention (Extendable)		✓
Pre-Built Parsers and Data Normalization		✓
Automated Data Enrichment		✓
Machine Learning Driven Event Correlation		✓
Non-adjacent Event Correlation		✓
Alert Noise Reduction		✓
Fully Visualized Attack Stories		✓
Automated (or One-Click) Incident Response		✓
Proactive Threat Hunting and IOC Search		✓
Global Threat Intelligence		✓

*including common frameworks like NIST, PCI, SOC2, etc.

**including Cyber, Reputation, Supply Chain
